APTITUDE [DAY - 1] PERCENTAGES:

1) Given:

Number increased by 20% becomes 120

Original number = ?

Let original number be x.

* Increase of 20%.

$$\Rightarrow x + 0.20x = 120$$

$$1.20x = 120$$

$$x = \frac{120}{1.20}$$

$$x = 100$$

$\therefore$ Original number = 100.

2) Given:

Price rise from 50K to 60K.

$\Rightarrow$ Increase $\Rightarrow$ 60000 − 50000

= 10000

$$\% \text{ increase} = \frac{\text{Increase}}{\text{Original}} \times 100$$

$$= \frac{10000}{50000} \times 100$$

$$= 0.2 \times 100$$

$$= 20\%$$

$\therefore$ Percentage increase = 20%.

3) Given:

Scored $\frac{72}{90}$.

Percentage $\Rightarrow \frac{72}{90} \times 100$

$\Rightarrow 80$.

$\therefore$ Percentage score = 80%.

4) Given:

Population ↑'se from 50k to 60k.

Percentage increase ⇒ ?

Increase ⇒ 60000 − 50000

= 10000

~~% ↑'se = $\frac{10000}{50000} \times 100$~~

~~= 0.2 × 100~~

~~= 20%~~

% ↑'se = $\frac{10000}{50000} \times 100$

= 0.2 × 100

= 20%

Percentage ↑'se = 20%

5) Original Price ₹800

Discount = 25 %

Discount amount ⇒ $\frac{25}{100} \times 800$

$= 200$

Final Price ⇒ $800 - 200$

$= 600$

Final price ⇒ ₹600
