$$\frac{4-3}{24} \Rightarrow \frac{1}{24}$$

T = 24 hours

DAY-5

APTITUDE

Q) 60 km in 1 hour

S = ?

speed = 60 km/hr.

to

m/s ⇒

$$60 \times \frac{5}{18}$$

$$= 16.87 \text{ m/s}.$$

Q) 40 km/h in 2 hours
60 km/h in 2 hour.

AS = ?

⇒ 40 × 2 = 80 km
⇒ 60 × 2 ⇒ 120 km
TD = 80 + 120
= 200 km
TT = 2 + 2 = 4 hrs.

$$AS = \frac{200}{4}$$

$$= 50 \text{ km/h}$$

Q) Opp directions ⇒ (sum)

$T_1 = 50$ km/h

$T_2 = 70$ km/h

$\therefore$ $50 + 70$

$= 120$ km/h

Q) walks ⇒ 5 km/hr

runs ⇒ 10 km/hr

T ⇒ to 15 km half walked & half run

TD = 15 km

Half walk = 7.5 km

Half run = 7.5 km.

$T = \frac{D}{S}$

$WT = \frac{7.5}{5} = 1.5$ hr

$RT = \frac{7.5}{10} = 0.75$ hr.

$TT = 1.5 + 0.75$

$= 2.25$ hrs

Q) Pole in 10 sec

$l = 100$ meter.

$S = ?$

$T = 10$ sec

$D = 100$ meters.

$$S = \frac{D}{T}$$

$$= \frac{100}{10}$$

$$= 10 \text{ m/s}.$$

$$\text{km/h} \Rightarrow 10 \times \frac{18}{5}$$

$$= 36 \text{ km/h}$$
